INTERNATIONAL INNOVATIONS ORIENTATION

Introduction sheet: SPIN Robotics

At **Spin Robotics**, we are aware of the challenging nature of industrial production. By introducing our collaborative solutions, we strive to improve working conditions among employees while at the same time increasing assembly quality and output. We aim to empower and provide benefits for both employees and manufacturers.

We are a team of creative individuals with different backgrounds and strengths, believing in revolutionizing assembly lines all around the world. Let's work together on the future of assembly.

Our mission is to revolutionize screwdriving in assembly through a truly safe employee-robot collaboration

We aim to close the gap between humans and robots in assembly lines by introducing innovative and smart collaborative tools. The goal is to free workers from tasks that can cause injuries and ensure that the employees are responsible for more creative, meaningful, and satisfactory work.

Happy and healthy employees with drive equal a prosperous company.

Our tools have been successfully used across a big number of different industries.
