

Introduction sheet: AIM Robotics

Why AIM ROBOTICS?

Precision

Our dispensers are electronically controlled removing the variation naturally present when using pneumatic solutions. This ensures that our dispensers deliver fluids with high repeatability for better quality control.

Ease of use

At Aim Robotics we believe in simplicity when it comes to set up and installation of our units. We would like the operators to feel comfortable when changing the application. We have, therefore, designed our dispensing units to be seamlessly integrated with the collaborative robots.

Safety

Our dispensing units are specially designed and manufactured to be in compliance with the collaborative robot safety standards whilst offering the best end-user experience.

Dispensing Made Simple™

Our tools are truly **Plug & Dispense** – fast to install and easy to set up. Electric Process Control ensures **highest repeatability** on the market.

All of this results in **10x faster deployment** and **zero headaches**.
