INTERNATIONAL INNOVATIONS ORIENTATION

Introduction sheet: Fipros A/S

FIPROS A/S, "Food Industry PROcessing Services", is a contract manufacturing and packing partner for food and food ingredient producing companies and start-ups. We offer a variety of different processing solutions, including e.g. blending, drying, milling, bioprocessing, compacting and packing.

At FIPROS we take pride in finding process solutions in close cooperation with our customers. We have a passion for solving problems and securing safe and effective food processes from the initial process development to well-documented, full scale production.

Innovations:

At FIPROS we love solving problems and finding individual solutions for our customers. This is what drives us in our daily work. Since 1992 we have developed a wide range of processing and packing solutions and are constantly on a mission to optimize and expand our existing technologies. This passion to improve and to find solutions to the trickiest processing challenges is an essential part of our company's culture.

All of our employees have well-founded know-how in their field and can give thorough advice throughout the process of developing, testing, upscaling and running the processing of new and/or innovative products. We are also open to installing new or additional technologies, if the new business case presents interesting opportunities.. We solely focus on process innovation, not product innovation, and can therefore guarantee hundred percent confidentiality in regards to receipts and product specifications.
